

Quick start (local development)

1. Prerequisites

- Python 3.10+
- pip

2. Clone and enter the project

```
git clone <repository-url>
cd TeamProjectCOM2020
```

3. Backend setup

```
cd backend
python -m venv venv
# Windows:
venv\Scripts\activate
# macOS/Linux:
# source venv/bin/activate

pip install -r requirements.txt
```

4. Database and seed data

```
python manage.py migrate
python manage.py seed_exhibits
```

Seed data is read from backend/exhibits/data/seed/exhibits.json and backend/exhibits/data/seed/quizzes.json. Exhibit images are loaded from backend/media/exhibits/images/ (see backend/media/exhibits/images/README.md).

5. Create a superuser (optional, for admin)

```
python manage.py createsuperuser
```

6. Run the server

```
python manage.py runserver
```

Open <http://127.0.0.1:8000/> in a browser.
