

Licence Decision

AI Failures Museum — Team Project COM2020

1. Project identification

Project name: AI Failures Museum. **Context:** Team Project COM2020 (Group Java The Hutt). Educational Django web application for learning from real-world AI system failures. **Repository:** TeamProjectCOM2020 (see README for structure and quick start).

2. Chosen licence

Licence: MIT License.

Rationale: The project is developed for educational purposes and is not intended for commercial deployment. The MIT License was chosen because it is permissive, well-understood, and allows future academic or educational reuse without legal barriers. It is compatible with our dependency stack (including Django, which is BSD-licensed) and does not impose copyleft obligations, which is appropriate for a coursework submission and potential portfolio use.

3. Permissions and restrictions

Under the MIT License: use, copy, modify, merge, publish, distribute, sublicense, and sell copies of the software are permitted, subject to retaining the copyright notice and licence text. The software is provided "as is" without warranty. No formal ethics approval is required for the current scope (see `ethical_and_legal_considerations.txt`).

4. Third-party and dependency licences

Core dependencies: Django (BSD-3-Clause), Pillow (HPND), and other packages listed in `backend/requirements.txt`. These are used in accordance with their respective licences and are compatible with distribution under the MIT License. No dependency imposes restrictions that conflict with the chosen project licence.

5. Content and data

Exhibit content: Curated case studies; for publicly reported incidents we present facts neutrally; sensitive cases are anonymised. Exhibit text and structure are project-authored or derived from public sources with appropriate care (see `ethical_and_legal_considerations.txt`).

Media: Exhibit images in `backend/media/exhibits/images/` are either project-created or used with appropriate rights; see `backend/media/exhibits/images/README.md` for attribution or sourcing.

6. Decision and review

The MIT License is adopted as the project licence. This decision is documented in this file and may be revisited if the project scope changes (e.g. commercial use, external data sharing, or inclusion of third-party content under incompatible licences).
